

# Have YOUR say on the future of Congenital Heart Disease research!

A national study has been launched to identify and prioritise the areas of future research in congenital heart disease that are most important to patients, their families, and healthcare professionals.

This is your chance to have your say – **so we want to hear from you!**

**What questions would you like to see answered by future research, relating to the diagnosis, treatment, or outcomes of congenital heart disease?**

The survey is now open and can be completed online by scanning the QR code using the camera on your phone.

Or it is available to download as a PDF in English, Welsh, Polish, Bengali, Urdu, Gujarati, and Hindi from the study website: [www.birmingham.ac.uk/congenital-psp](http://www.birmingham.ac.uk/congenital-psp)

With your help, the findings will be used to develop a national strategy and guide the design of future studies to address the issues that matter most, and so will have a major impact on UK congenital heart disease research!

This study is funded by George Davies, high street fashion entrepreneur behind brands such as Next, Per Una, and George at Asda, through a generous charitable donation.
