

Data Management Spreadsheet for Occupational Therapy PSP

PSP Name	Total number of verified uncertainties identified by the PSP	Uncertainty (PICO formatted indicative uncertainty where possible. Advised minimum requirements are 'Population' and 'Intervention'. Not all submissions may be suitable for PICO structure, but they should be in a format that will ultimately be of value to the	Explanatory note (a plain language summary of up to 150 words, explaining key points of the uncertainty and why it is important, for research funders to begin working on. PSPs may wish to include examples of the original survey submissions here)	Date of the priority setting workshop	Rank of the uncertainty at the final workshop. (If no rank was agreed, please	Evidence (reference, and weblink where available, to the most recent relevant systematic review identified by the PSP, plus a maximum of 2 other systematic reviews, including protocols for future systematic reviews, that the PSP considers relevant.)
Occupational Therapy PSP	66	How does occupational therapy make a difference and have impact on everyday lives?	The purpose of this question is to explore the unique contribution that occupational therapy makes to people who access services and the impact it has on their everyday lives.	27-Jul-20	1	Evidence addressing this question is largely anecdotal in nature or from conference abstracts (eg. Stuart-Neil, 2016) and there are no research studies directly addressing this question. <b>This is an area of uncertainty.</b> Stuart-Neil, L. (2016). "It is the little things which really matter to patients...College of Occupational Therapists 40th Annual Conference and Exhibition and the Specialist Section - Trauma and Orthopaedics Annual Conference, 28-30 June 2016 - Harrogate, England." British Journal of Occupational Therapy 79: 128-129.
Occupational Therapy PSP	66	How can occupational therapists ensure that person-centred practice is central to how they work?	Occupational therapists consider person- or client-centeredness to be a core principle of the profession. However, it is agreed that in some areas of practice a person-centred - approach can be more difficult to achieve, and that the people who access occupational therapy services do not always agree that they have experienced person-centred practice. This question aims to explore how the profession can uphold this core element of its philosophy in practice, regardless of the context within which services are provided	27-Jul-20	2	The evidence addressing this question is largely comprised of conversational pieces and smaller scale studies. <b>The question has partially been addressed in the evidence base.</b> D'Cruz, K., et al. (2016). "Client-centred practice: Perspectives of persons with a traumatic brain injury." Scandinavian Journal of Occupational Therapy 23(1): 30-38. Fransen, H., et al. (2015). Occupational Therapy PSP	66	How can occupational therapists work more effectively with the family and carers of people who access services?	Without undermining the importance of person-centred practice, this question focuses on the additional importance of working in partnership with the families and carers of the person accessing services to improve outcomes for people accessing services.	27-Jul-20	3	There are some conversational and observational papers but no robust evidence in relation to this question (see example references). <b>This is an area of uncertainty.</b> An, S.-J. L. (2017). "Parent Training Occupational Therapy Program for Parents of Children with Autism in Korea." Occupational therapy international 2017: 4741634-4741634. Augustyn, J. and A. Wallisch (2017). Occupational Therapy PSP	66	What are the long-term benefits of occupational therapy intervention?	This question asks about the enduring impact of occupational therapy interventions after intervention has finished. Does the person who accessed occupational therapy services continue to benefit from the intervention/s once they've been discharged from occupational therapy? What is the nature of any lasting benefits? How do they compare to the benefits measured at discharge?	27-Jul-20	4	There is limited evidence addressing this question. <b>This is an area of uncertainty.</b> Ng, S. S. W., et al. (2013). "Long-term Efficacy of Occupational Lifestyle Redesign Programme for Strokes." Hong Kong Journal of Occupational Therapy 23(2): 46-53. Nielsen, T. L., et al. (2017). "What are the short-term and long-term effects of occupation-focused and occupation-based occupational therapy in the home on older adults' occupational performance? A systematic review." Scandinavian Journal of Occupational Therapy 24(4): 235-248. Weaver, J., et al. (2016). "Long-Term Functional Outcomes Following Interdisciplinary Rehabilitation: A Longitudinal Study." British Journal of Occupational Therapy 80(7): 417-422.

Occupational Therapy PSP	66	What are the benefits or impact of occupational therapy in primary care settings? (e.g. services delivered by your local general practice surgery, community pharmacy, dental and optometry (eye health) services)	The delivery of occupational therapy services in primary care settings is a relatively new and emerging area of practice. It helps to address people's needs at an early stage and provides preventative care and/or self-management which can also help to reduce demand on other services. This question aims to explore the benefits and impact of this emerging area of practice for individual people accessing services in this way, and more broadly for the effective and timely delivery of health and social care services across communities.	27-Jul-20	5	Existing evidence is mainly commentary or news based articles on the benefits of OT in primary care, or small survey or focus group based studies that look at where OT's are currently practicing in primary care. <b>This is an area of uncertainty.</b> Bolt, M., et al. (2019). "Scoping review: occupational therapy interventions in primary care." Primary Health Care Research & Development (Cambridge University Press / UK) 20: N.PAG-N.PAG. Chamberlain, E., et al. (2019). "Occupational therapy in primary care: exploring the role of occupational therapy from a primary care perspective." British Journal of General Practice 69(688): 575-576. Cunningham, R. and S. Valasek (2019). "Occupational Therapy Interventions for Urinary Dysfunction in Primary Care: A Case Series." American Journal of Occupational Therapy 73(5): 1-8. Dahl-Popolizio, S., et al. (2016). The American Journal Of Occupational Therapy: Official Publication Of The American Occupational Therapy Association 73(5): 7305185010p7305185011-7305185010p7305185010.
Occupational Therapy PSP	66	How can occupational therapy services be more inclusive of both mental and physical health?	A core belief of occupational therapy is that mental and physical health and overall well-being are interlinked. This holistic view of people means that both mental and physical health are included as key components of the curriculum when studying to become an occupational therapist. However, it can be a challenge to maintain this holistic view in different practice settings that do not necessarily support such an integrated approach. This question aims to explore how occupational therapy services can be organised and delivered to ensure that they identify and address the physical and mental health needs of the people accessing those services.	27-Jul-20	6	Other than a few discussion papers, there is no clear evidence addressing this question. <b>This is an area of uncertainty.</b>
Occupational Therapy PSP	66	What is the role of occupational therapy in supporting self-management? (e.g. helping people with illness to manage their health on a day-to-day basis)	Occupational therapy provides practical support to empower people, to facilitate recovery and to overcome barriers to participating in the activities that they need, want or have to do. This question aims to explore the specific role occupational therapy has in enabling people to take the lead in managing their health and well-being and any on-going health condition/s they may be living with.	27-Jul-20	7	Although there is literature examining occupational therapy involvement in self-management, it is largely in the area of specific interventions and their effectiveness. No evidence was located that specifically addresses the role of OT in this area. <b>This is an area of uncertainty.</b>
Occupational Therapy PSP	66	What is the role or impact of occupational therapy in reducing hospital admissions?	Occupational therapy is increasingly being recognised as having a role in preventing people from vulnerable groups (such as frail, older people and people living with long-term conditions) from being unnecessarily admitted into hospital. Experience suggests that home/access visits, access to occupational therapy in primary care settings, and inclusion in prevention and response services reduces hospital re/admissions. This question aims to explore this area in more detail to provide stronger evidence about the nature of the role and the impact it has. This includes the impact on the lives of the people accessing those services, the impact on the demands for, and effectiveness, timeliness and efficiency of acute services.	27-Jul-20	8	Other than the non-OT specific paper listed, no up-to-date evidence found. <b>This is an area of uncertainty.</b> Chown, G. and T. Soley (2016). "A Phenomenological Study on the Perception of Occupational Therapists Practicing in the Emergency Department." Open Journal of Occupational Therapy (OJOT) 4(1): 1-15. College of Occupational Therapists (2015). Urgent care: the value of occupational therapy. London. James, K. (2016). "Occupational therapists in Emergency Departments." Occupational Therapy PSP	66	How can occupational therapists work most effectively with other professionals to improve outcomes for people who access services? (e.g. multi-disciplinary teams, commissioners, community agencies)	Occupational therapists work with a wide range of other professionals, statutory and non-statutory service providers and commissioners of services with the aim of providing improved services to and outcomes for the people who access their services. This question aims to explore the most effective ways for occupational therapists to engage and work with these people and groups, for the benefit of the people who access their services.	27-Jul-20	9	<p>The evidence addressing this question is limited, comprising largely of discursive pieces and small scale studies. <b>This is an area of uncertainty.</b></p> <p>Aguilar, A., et al. Occupational Therapy PSP	66	What is the cost-effectiveness of occupational therapy services?	There is a lack of economic evaluations of occupational therapy service delivery. It is acknowledged that many will feel uncomfortable at the thought that 'cost' might be prioritised over other measures, such as the outcomes and experiences of the people who access occupational therapy services. In the context of limited public funding, and the expectation that statutory services spend taxpayers' money wisely, it is important that the profession can demonstrate that our services make a difference to people's lives and are cost-effective in doing so. This question therefore aims to provide evidence about the extent to which different occupational therapy services and interventions offer value for money and are therefore worth investing in.	44039	10	<p>There is currently one systematic review (Green and Rod, 2017) that considers economic evaluations in OT (which concludes a lack of robust evidence). Studies published after this study focus on specific areas. The area has not been comprehensively researched. <b>This is an area of uncertainty.</b></p> <p>Brandt, A., et al. (2016). Occupational Therapy PSP	66	How does the amount of occupational therapy received affect outcomes for people who access services?	In the context of limited resources and services, it is important to acknowledge that while withdrawing services too early may restrict the benefits of occupational therapy for people who access services, it is possible that continuing to provide services beyond a certain point might not lead to any further gains. In these circumstances, others who might benefit from occupational therapy might unnecessarily miss out on or have delayed access to services. This question therefore aims to explore how the frequency and duration of a range of occupational therapy interventions influences the outcomes for people, and whether an optimal amount can be identified for maximal effectiveness for each.	27-Jul-20	11	<p>There is limited evidence addressing this question. <b>This is an area of uncertainty.</b></p> <p>Abdullahi, A., et al. Occupational Therapy PSP	66	What is the role of occupational therapy in addressing social, political and environmental issues at a societal level to address well-being and participation?	Occupational therapists work not only with individuals but also with groups and communities. Occupational therapists view disability from a social model perspective and social justice is a core value of the profession. This question therefore aims to explore the role of occupational therapy at a societal, rather than an individual or small group level, with a view to expanding the reach of its benefits to more people.	27-Jul-20	12	The evidence addressing this area is mostly conversational and sparse in existence. <b>This is an area of uncertainty.</b> Aoyama, M. (2014). "Occupational therapy and environmental sustainability." Australian Occupational Therapy Journal 61(6): 458-461. Gallagher, M., et al. (2015). "An integrative review of social and occupational factors influencing health and wellbeing." Frontiers In Psychology 6: 1281-1281. Simó Algado, S. and E. Ann Townsend (2015). British Journal of Occupational Therapy 82(6): 383-385.
Occupational Therapy PSP	66	What is the effectiveness of occupational therapy for mental health?	While there is growth in the evidence of the effectiveness of occupational therapy for people experiencing acute or enduring mental health problems, there is a recognised need to expand and further develop the evidence-base. This question therefore aims to generate evidence to fill these gaps in relation to mental health focused occupational therapy services offered in a range of contexts, for people at various points across the lifespan, who come from various communities and background and who are living with a range of mental health issues.	27-Jul-20	13	The most recent evidence is a literature review by Kirsh et al (2019) that concludes a more developed evidence-base is needed. <b>This question has been partially addressed in the evidence base.</b> Arbesman, M. and D. W. Logsdon (2011). "Occupational therapy interventions for employment and education for adults with serious mental illness: A systematic review." Occupational Therapy PSP	66	How can occupational therapists work effectively with digital technology to enhance their interventions and lives of people who access services? (e.g. using smart devices to manage health and illness)	In the context of increasing everyday use of digital technology in various aspects of life, this question is about how occupational therapists can use it effectively in the delivery of their interventions and as part of their interventions to support, enable and empower people to manage their own health conditions, live their lives and do the things they need, want or have to do.	27-Jul-20	14	<p>There is emerging evidence addressing this question but at present it is varied in scope and quality, and is limited. <b>This is an area of uncertainty.</b></p> <p>Axford, C., et al. Occupational Therapy PSP	66	How does assistive technology, compensatory equipment and housing adaptations provided through occupational therapy impact on the lives of people who access services?	While there is some evidence addressing this question, for the most part it is based on small-scale studies and there is a recognised need to expand and further develop the evidence-base. This question therefore aims to explore if and how occupational therapy interventions such as providing a range of assistive technologies (such as environmental controls), large and small compensatory equipment (such as wheelchairs and kettle-tippers) and recommending adaptations to homes (such as the installation of stairlifts or level-access wetrooms) make a difference to people's lives. Do people benefit from these interventions and do they enable people to live their lives more easily?	27-Jul-20	15	<p>There is some evidence addressing this question - mainly small scale studies. <b>This question has partially been addressed in the evidence base.</b></p> <p>Arthanat, S. and K. Occupational Therapy PSP	What is the value of occupation as an intervention and how does effectiveness vary with the way it is used? (e.g. 'occupation-focused' interventions based on understanding a person, their environment and the meaningful occupations in their life, or 'occupation-based' interventions in which doing a meaningful occupation forms the focus)	'Occupation' is a term that refers to the practical and purposeful activities that allow people to live independently and have a sense of identity. They are the meaningful things that people need, want or have to do, and therefore vary from person to person. The way occupational therapists use occupations within their interventions can vary. For example, an intervention might be 'occupation-focused' and aim to support a person to resume a meaningful occupation (such as returning to and participating in parkrun after a myocardial infarction, or heart attack). Alternatively, an intervention might be 'occupational based' in which case an activity that is already meaningful to an individual might be used to help achieve specific goals (such as running with a local club to help managing depression). This question aims to explore whether there is value in using occupation as a focus for interventions, and how the effectiveness of interventions may vary depending on whether an occupation focused or occupation based perspective is taken.	27-Jul-20	16	There is some evidence addressing this area, but varied in nature and quality. <b>This question has partially been addressed in the evidence base.</b> Maclean, F. and J. Breckenridge (2015). "Use of occupation-focused language by occupational therapists in physical health care settings when considering older people and alcohol use." Occupational Therapy PSP	What is the nature of the relationship between occupation and health and well-being?	The aim of this question is to provide research evidence about the nature of the recognised inter-relationship between occupation, mental and physical health and overall well-being that underpins the occupational therapy profession.	27-Jul-20	17	Other than theoretical discussion papers listed here, other evidence tends to focus on mental health or other areas of recovery rather than in both areas of mental and physical. <b>This is an area of uncertainty.</b> Fortune, T. and M. Kennedy-Jones (2014). "Occupation and its relationship with health and wellbeing: the threshold concept for occupational therapy." Australian Occupational Therapy Journal 61(5): 293-298. Hammell, K. R. W. (2014). "Belonging, occupation, and human well-being: an exploration." Canadian Journal Of Occupational Therapy. Revue Canadienne D'ergotherapie 81(1): 39-50. Madsen, J., et al. (2016). "Toward the reconceptualization of the relationship between occupation and health and well-being." Canadian Journal Of Occupational Therapy. Revue Canadienne D'ergotherapie 83(4): 249-259.
Occupational Therapy PSP	What do other people (including healthcare professionals and other colleagues occupational therapists might work with, people who access services and their families and carers), think about the role of occupational therapy?	Occupational therapy draws on a broad range of skills and operates in a wide range of contexts within and beyond statutory health and social care provision. The scope of occupational therapy practice spans mental and physical health and working with a wide range of people from various groups and communities at various points across the lifespan. Occupational therapy adopts a person-centred, holistic, psychosocial approach that aims to empower people accessing services to self-manage, self-determine and participate in the everyday 'occupations' or activities that are individually meaningful to them. All of these features mean that the profession can be challenging to precisely and neatly describe, and the 'tools' in the occupational therapy 'toolbox' can superficially appear to be common-sense. How the profession is perceived continues to be of interest to many, and this question aims to explore those views from a range of perspectives.	27-Jul-20	18	Other than a small number of papers concentrated in specific areas of healthcare and testimonials from patient experience websites and media libraries, there is very little research-based evidence to answer this question. <b>This is an area of uncertainty.</b> Badger, S., et al. (2016). "It's not about treatment, it's how to improve your life": The lived experience of occupational therapy in palliative care." Palliative & Supportive Care 14(3): 225-231. Kingston, G., et al. <p>What do people who access services value most about occupational therapy?</p>	<p>What parts of the acute OT service offered within hospital are valued by patients the most?          I would like to know more about what carers have found most useful from the Occupational Therapy their loved ones have received in Palliative Care.          What are the most important outcomes of mental health occupational therapy interventions, to service users, and to services, that occupational therapists should measure in practice and research?          How much is the occupational therapy intervention valued? from both a cost benefit and a patient perspective.</p>	<p>No evidence found addressing this question. <b>This is an area of uncertainty.</b></p>	<p>Occupational therapists, Service Users</p>

<p>What is the effectiveness of occupational therapy for mental health?</p>	<p>What is the evidence that Occupational therapy can benefit people with mental health issues. Is occupational therapy effective in community mental health? Is it more effective than other interventions? What OT interventions are effective for people with long term/severe and enduring mental health problems? Do mental health occupational therapy interventions aid recovery and are they cost effective? I would like to know how inpatient mental health settings demonstrate and measure the success of occupational therapy groups, and how this carries over into patients lives post discharge What is the evidence base for OT in community mental health recovery? How do we make the case for occupational therapy in the mental health world when all community mental health posts are now open to nurses, social workers and occupational therapists/ Why is it so difficult for military veterans and people with invisible injuries to access mental health OTs? Effects occupational therapy has on maintaining good mental health and effects occupational therapy has on self esteem. What are the evidence based OT interventions for young people of the following clinical presentations - Trauma, Depression, Anxiety, Emotional Intensity? What contribution can it make to recovery from psychosis?</p>	<p>The most recent evidence is a literature review by Kirsh et al (2019) that concludes a more developed evidence-base is needed. <b>This question has been partially addressed in the evidence base.</b> Arbesman, M. and D. <p>How can occupational therapy services be more inclusive of both mental and physical health?</p>	<p>Why is occupational therapy separated into physical and mental health still? I think there needs to be more recognition that occupational therapists are holistic and therefore can work with ALL people to make a difference.  Can one OT effectively address a range of problems a person might have if they have both mental health and physical health difficulties (invariably services are not set up in a way that allow an OT to work in this way with individuals).  Does occupational therapy as an intervention equally contribute to mental as well as physical health outcomes?  We say that our profession uses a holistic approach, so why are we still working in silo when it comes to mental health and physical health?</p>	<p>Other than a few discussion papers, there is no clear evidence addressing this question. <b>This is an area of uncertainty.</b></p>	<p>Occupational Therapists, Service Users, Carers, Students</p>
<p>What is the role or impact of occupational therapy in vocational rehabilitation? (e.g. helping people with health problems to access, maintain or return to employment)</p>	<p>How can OTs contribute to helping individuals to stay in work or return to work following a mental illness?  The role of occupational therapists in supporting individuals with disabilities or mental health needs to retain paid employment (job retention).  Personally I would like to see more research on the vocational rehabilitation of stroke survivors  What is the evidence that OT's are best placed to deliver vocational rehabilitation ?  What evidence is there that occupational therapy interventions get people back to work more quickly?  How effective is OT is helping employed people with health problems to remain in work/return to work whilst a sickness absentee?</p>	<p>There is some evidence in this area. There are three Cochrane Systematic reviews (Crowther et al, 2001; Hou et al, 2017; Khan et al, 2009) focussing on VR. None seem to focus on OT delivered VR). This question has been partially addressed in the evidence base.  Arbesman, M. and D. W. Logsdon (2011). <p>What is the role of occupational therapy in public health?</p>	<p>The impact of occupational therapists in public health / health promotion and increasing importance of work in this area.  How can occupational therapy link in with prevention and health promotion?  What is the role of occupational therapy within public health?  What are the most effective ways for occupational therapists to make an impact on public health outcomes for individuals and/or communities?  Is OT effective in a preventative context?  The efficacy on the important role for OTs in public health  Does occupational therapy involvement in public health and preventative initiatives make a difference to outcomes for stakeholders?</p>	<p>Other than the conversational article by Kendall (2016) there is no clear evidence addressing this question. <b>This is an area of uncertainty.</b>  Kendall, C. (2016). "Designing green space for occupational engagement and public health." <i>British Journal of Occupational Therapy</i> 79: 108-108.</p>	<p>Occupational therapists, Carer, Service Users, People with a different interest</p>

<p>How does occupational therapy make a difference and have impact on everyday lives?</p>	<p>What impact does occupational therapy make to people's lives?          How do Occupational therapists explain how they can make a difference to people's lives          would be interested in research from service users and carers on their views on the impact they feel occupational therapy has had on their lives (if any). I feel this should be both qualitative and quantitative research so that we can show to higher up organisations the impact that OT has, but also share people's stories. Also to have OTs share their experiences of the impact they think have had on people's lives.          I would like to understand how occupational therapy services have impacted on a persons life through their narratives of their experiences. What do they feel would have happened/ life have been like without OT?          how can we evidence the difference to a persons life as a result of OT intervention in community mental health rehabilitation and recovery?          I would like to see big picture information of added value to peoples lives, rather than small level cost savings.          I wonder whether facilitation of engagement and/or participation in occupation (through occupational therapy) makes a difference to a persons potential to live well with/through future challenges.</p>	<p>Evidence addressing this question is largely anecdotal in nature or from conference abstracts (eg. Stuart-Neil, 2016) and there are no research studies directly addressing this question. <b>This is an area of uncertainty.</b>          Stuart-Neil, L. (2016). "It is the little things which really matter to patients...College of Occupational Therapists 40th Annual Conference and Exhibition and the Specialist Section - Trauma and Orthopaedics Annual Conference, 28-30 June 2016 - Harrogate, England." British Journal of Occupational Therapy 79: 128-129.</p>	<p>Occupational therapists, Carers, Students, Services Users, People with a different interest, Other</p>
<p>What is the role of occupational therapy in addressing social, political and environmental issues at a societal level to address well-being and participation?</p>	<p>Preparing our clients for climate change - we are entering new worlds with increased uncertainty - what can we offer as Occupational Therapists?          What role should Occupational Therapists have in helping people adjust to the life changes made necessary by a move to a low carbon economy?          How protest and protest occupations relate to OT paradigms/models of practice and their implications for OT practice and the call for greater political awareness/occupation justice          What adaptations are required to the occupational therapy process and specific interventions to work in a culturally competent manner with people of different demographics and protected characteristics of all ages (e.g. non-white, men, non-heterosexual, working class, lower socioeconomic groups)          How do people's living environments impact on their ability to become citizens? -Thinking beyond adapting environments to the wider influence of living environments/communities/systems on all people with health and social care needs that occupational therapists work with.          Environmentally friendly practice within occupational therapy?</p>	<p>The evidence addressing this area is mostly conversational and sparse in existence. <b>This is an area of uncertainty.</b>          Aoyama, M. <p>How effective are sensory approaches as an occupational therapy intervention?</p>	<p>The use of sensory processing with adults with Learning disabilities  as a parent of a child living with ASD who has benefitted from OT input, I would like to see more research into the area of Ayres sensory integration, and how an occupational therapist can support other families of children living with autism. I would like to understand why this type of input needs to be organised privately and who so little early intervention is available for our children through statutory services.  My daughter went from being unable to write, use a knife and fork, get on gym equipment, or dress independently to writing neatly, automatically using a knife and fork and doing gymnastics ashobby and dressing independently..... Yet statutory occupational therapy only offered cognitive strategies regarding dressing and handwriting..... Occupational therapy using Ayres SI made such a difference, why is there no evidence for this approach to treating bright children with dyspraxia?  How does SI change children's lives?  I am not convinced that the 'sensory integration' activities my autistic son is offered have any effect at all. No evidence base either. Much better when they stick to actual occupational therapy - eg teaching him to hold a pen, or cut cheese  Value of occupation focussed sensory processing approach for adult population with or without mental health issues that impact on their participation in everyday life</p> <p>Empirical evidence showing how the use of sensory interventions have either a positive or negative impact on occupational performance issues for children who have suffered developmental and relational trauma.  Why does the COT fail to recognise interventions such as Sensory Integration when it has been proved to have a benefit for a range of clientel?  Why isn't there more research and training on developing sensory profiles and crating individualised sensory diets. In fact, why is SPD not recognised fully in the UK when it is so obviously a big issue that can be addressed and improved?</p>	<p>The evidence addressing this question is currently mixed. RCT's and systematic reviews generally conclude some areas show promise but evidence is insufficient. This question has partially been addressed in the evidence base.  Bodison, S. C. and L. D. --	--	--	--

<p>How can occupational therapy work more effectively with the family and carers of people who access services?</p>	<p>Is there any scope for occupational therapists to work with families as a unit, rather than one individual service user, within the NHS, some areas of independent practice appear to offer this, but mainly in paediatrics. Why don't Occupational therapists work in a tri partite way with school and family to ensure the child and their needs are at the centre of the therapy input in all their environments? How are OT's working with families where either the children or the parents have issues with each other, ie: toxic parenting or self harm in children and issues with understanding MH conditions? How well do OTs consider the needs of carers and contribute to personalised whole family approaches within their work? How can occupational therapy goals for younger children be disseminated to parents in an accessible manner and how can parents be supported to enable children to engage in OT Occupational therapists support families to promote their child's development. The child's development may plateau at the same point with or without of input but family members can celebrate the achievements and be less frustrated promoting a positive nurturing environment. Provision of a leaflet does not meet this need</p>	<p>There are some conversational and observational papers but no robust evidence in relation to this question (see example references). <b>This is an area of uncertainty.</b> An, S.-J. <p>What is the role or impact of occupational therapy in pain management?</p>	<p>What can OT do to help manage pain other than pacing and grading Why isn't occupational therapy utilised more for people experiencing chronic pain? Is the lack of evidence for occupational therapy preventing people getting the help they need? I am an occupational therapist who has nearly 20 years experience of working on pain management programmes, which has been extremely rewarding and a great use of my skills. Our service has now been decommissioned, and is instead being provided by a private company, who do not include occupational therapy as part of their MDT. This may be due to the lack of evidence regarding our role. The research questions might be something like: How effective is occupational therapy in treating people with chronic pain conditions? Is a pain management programme that includes occupational therapy more effective than one which doesn't? Why is the difference that occupational therapy can make to the lives of people with chronic pain overlooked by education establishments and commissioners? We have the skills to help a large group of people often seen as 'difficult to help', but this keeps being ignored. We need to collect evidence and shout louder about the ways we can help chronic pain patients, otherwise they will continue to 'miss out'. What Occupational Therapy interventions are offered as part of community pain management services in the UK?</p>	<p>There are numerous papers addressing this question but in many different contexts. There as some systematic reviews and further review registered on PROSPERO (Tokalahi et al, 2018). Most other studies are small or discursive in nature. <b>This question has been partially addressed in the evidence base.</b> Amris, K., et al. (2019). <p>How effective is occupational therapy within secure mental health settings?</p>	<p>How effective is occupational therapy within the forensic secure directorate? Evidence base for practising in forensic services is limited in comparison to other specialist areas. 2. The educational needs of inpatients. In our setting the focus is very much on the medical model, but so many of our patients would like to explore educational opportunities. However due to the nature of health care there is no funding to meet this need. Again in a prison setting, enormous amount of funding is provided for courses etc. I find this particularly frustrating. What is the occupational therapist's role in addressing offending behaviour in forensic mental health?</p>	<p>There are a number of individual studies in the general area of OT in forensic mental health settings (see example references), but no evidence directly addressing this question. <b>This is an area of uncertainty.</b> Brennand, D. and S. Laws (2016). "Occupational therapy in a male prison within the offender personality disorder pathway." British Journal of Occupational Therapy 79: 82-82. Crabtree, J. L., et al. (2016). <p>What are the most effective occupational therapy approaches in improving the lives of people with learning disabilities?</p>	<p>How do we effectively and efficiently reduce health inequalities and adults with learning disabilities. I am interested in the difference occupational therapy makes to people with learning disability in community settings. Literature concentrates on sensory interventions but our scope is so much more than that. How do we increase their independence and improve their quality of life, in particular for people with a learning disability. Is OT effective in maintaining quality of life and independence for people with learning disabilities and dementia? How effective is Occupational Therapy with the adult learning disability population What is the evidence base for working with adults with learning disabilities? See above. Adult learning disability OT doesn't seem to be researched much. I don't know if it makes that much difference to people's lives. I say this as an LD OT for a lot of years. How does OT in a specialist college for adults with learning disabilities increase independence and reduce future care costs?</p>	<p>The evidence addressing this question is comprised of a small number of small studies that are varied in nature and quality. <b>This is an area of uncertainty.</b> Benford, F. (2017). "Use of powered mobility for a young adult with profound and multiple learning disabilities: a practice analysis." British Journal of Occupational Therapy 80(8): 517-520. <p>How can occupational therapy work effectively with people engaged in 'dark occupations'? (e.g. activities that may be seen as harmful, anti-social, offensive or illegal)</p>	<p>Engagement in dark occupations is a topic that has limited research and yet in Mental health services they are very often the occupations that perpetuate illness. What is the role of dark occupations in mental health care and should we be promoting these more as a profession? Is there a role for occupational therapists to help with anti social behaviours and occupations? How would an occupational therapist go about helping a service user who wants to engage in their meaningful occupation which is referred to as a 'dark' occupation, for example, drinking, aggressive activity? What's an effective way of working with CYP who engage in dark occupations? Also OTs working with child sex offenders- this is an area of my clinical interest. Motivation to face consequences of behaviour and engagement with therapy about sexual preferences, control etc...</p>	<p>The evidence in this area is largely discursive and opinion based in nature. <b>This is an area of uncertainty.</b> Twinley, R. (2013). "The dark side of occupation: A concept for consideration." Australian Occupational Therapy Journal 60(4): 301-303. Twinley, R. and G. Addidle (2012). "Considering violence: the dark side of occupation." British Journal of Occupational Therapy 75(4): 202-204.</p>	<p>Occupational therapists, Students</p>
<p>What is the value or impact of school based occupational therapy?</p>	<p>What would the outcome/benefit be for children if an OT was given extra training to undertake a full time dual OT-teaching role in an EYFS setting? I.e. is there any benefit of an OT taking on a teaching role? I would like clarity about the scope and role of occupational therapy within special needs education. what difference could an occupational therapist make to children's lives in mainstream school? 3. How can/does occupational therapy contribute to child mental health in schools?</p>	<p>The evidence base addressing this area is very limited. <b>This is an area of uncertainty.</b> Chan, C., et al. (2017). "An integrative review of school-based mental health interventions for elementary students: Implications for occupational therapy." Occupational Therapy in Mental Health 33(1): 81-101.</p>	<p>Occupational therapists, Carers, Service Users, People with a different interest</p>
<p>What is the effectiveness of occupational therapy in critical care? (eg. intensive care)</p>	<p>The effects of occupational therapy in critical care How does the role of OTs in critical care follow up clinics benefit people after a critical care stay? What OT interventions should be used in critical care? How does OT intervention in critical care improve long term outcomes?</p>	<p>The strongest evidence in this area is likely to a systematic review by Costigan et al (2019) which suggests further research is needed. <b>This question has been partially addressed in the evidence base.</b> Algeo, N. and L. M. Aitken (2019). "The evolving role of occupational therapists in adult critical care in England: A mixed methods design using role theory." Irish Journal of Occupational Therapy 47(2): 74-94. <p>What is the role of the occupational therapist in medical prescribing?</p>	<p>Why do we not prescribe medications, within our scope of practice? Where is the Occ Therapy profession in terms of prescribing? Could OT prescribers in acute outpatient settings (i.e hand therapy) reduce the incidence, or effects from conditions such as complex regional pain syndrome? What is the evidence for Occupational therapists making recommendations for adjustment to aid medication taking. Are dosette boxes more commonly recommended and how often are the medications reviewed by the different health care professionals collaboratively. Medications can be key to a patients quality of life, pharmacists, prescribers and OTs should work together more to work out the best adjustments to make sure patients can be independent with their medications and in my experience as the two professions we rarely work together. Can occupational therapists be trained to prescribe and administer medication? Including depot medication?</p>	<p>No evidence was found addressing this question. <b>This is an area of uncertainty.</b></p>	<p>Occupational therapists, Service Users, People with a different interest</p>
<p>What are the long-term benefits of occupational therapy intervention?</p>	<p>What longer term research has been completed on the longer term benefits of OT interventions? What is the long term benefit of seeing an occupational therapist in a mental health setting, dementia care setting, social care setting? long term implications/outcomes following occupational therapy in paediatrics The long-term benefits of occupational therapy - post discharge. Does the impact of OT have substantial lasting effects? I'd be interested in the long term benefits of some intervention- have people had to be re referred if so why same or different reason Long-term benefits of occupational therapy - longitudinal studies</p>	<p>There is limited evidence addressing this question. <b>This is an area of uncertainty.</b> Ng, S. S. W., et al. (2013). "Long-term Efficacy of Occupational Lifestyle Redesign Programme for Strokes." Hong Kong Journal of Occupational Therapy 23(2): 46-53. Nielsen, T. L., et al. (2017). "What are the short-term and long-term effects of occupation-focused and occupation-based occupational therapy in the home on older adults' occupational performance? A systematic review." British Journal of Occupational Therapy 80(7): 417-422.</p>	<p>Occupational therapists, People with a different interest, Other</p>
<p>How does assistive technology, compensatory equipment and housing adaptations provided by occupational therapy impact on the lives of people who access services?</p>	<p>What impact do major adaptations have on people's quality of life? Why do we not respect the "meaning of home" when adapting homes for children and adults? We focus on disability vs what is meaningful to the individual. How can we respect "meanings of home" more? Range of valid recent research about benefits of providing compensatory equipment and adaptations particularly with reference to discharge from acute medical admission the efficacy of weighted equipment for children and young people in enabling them to participate in everyday activities? Are adaptations done too late to really make a difference? Quantitive research into the positive changes minor adaptions have on a persons safety and independence  Sometimes Occupational Therapy can improve an area of a person's life at the same time as diminishing another area. For example providing moving and handling equipment which will improve transfers however this means the person can no longer share a bed with their partner, is this acceptable? When should occupational therapists provide assistive devices and what might be the benefits or risks of provision?</p>	<p>There is some evidence addressing this question - mainly small scale studies. <b>This question has partially been addressed in the evidence base.</b> Arthanat, S. and K. <p>How effective are occupational therapy interventions in people with neurological conditions? (e.g. apraxia, stroke, brain-injury, cerebral palsy, dementia)</p>	<p>evidence for interventions particularly in stroke          What is the most effective way to offer physical rehabilitation to someone with a dense upper limb after stroke?          How does occupational therapy impact brain injury rehabilitation          How effective is CO-OP with children with cerebral palsy          What difference to occupations can OTs make by considering 24 hour positioning for people with dementia and other deteriorating neurological conditions?          What evidence is available on the effectiveness of OT interventions in Dementia          There is a huge gap in research pertaining to occupational therapy and chronic fatigue syndrome, despite the fact that CFS affects more people than multiple sclerosis which is much more researched.          Best practice guidelines on treatment of apraxia</p>	<p>There is limited area addressing the broad aspect of this question. <b>This is an area of uncertainty.</b>          Gardiner, P., et al. (2018). "Occupational therapy for functional neurological disorders: a scoping review and agenda for research." CNS Spectrums 23(3): 205-212.          Mazer, B., et al. (2015). "A randomized clinical trial to determine effectiveness of driving simulator retraining on the driving performance of clients with neurological impairment." British Journal of Occupational Therapy 78(6): 369-376.</p>	<p>Occupational therapists, Carers, Service Users, Students, People with a different interest, Other</p>
<p>What is the role of occupational therapy in supporting self-management? (e.g. helping people with illness to manage their health on a day-to-day basis)</p>	<p>2. Role of OT in supporting people with long-term conditions to self-manage their condition          Are we more effective in promoting self-management in terms of the NHS agenda &amp; long term plan?</p>	<p>Although there is literature examining occupational therapy involvement in self-management, it is largely in the area of specific interventions and their effectiveness. No evidence was located that specifically addresses the role of OT in this area. <b>This is an area of uncertainty.</b></p>	<p>Occupational therapists, Other</p>
<p>What is the effectiveness of occupational therapy in fatigue management?</p>	<p>Does Occupational therapy make a difference to the lives of people with fatigue?          I do find it challenging at times working with patient who have MND and PD and you are trying to educate them on equipment which would reduce their fatigue and improve the quality of life for themselves and their family who are caring for them.          Which OT strategies are effective for people with fatigue and/or apathy          Does fatigue management really work          evidence base for the value of specific OT interventions to manage symptoms, i.e. fatigue management, cognitive impairment, anxiety management etc</p>	<p>The strongest evidence in this area is likely to be an umbrella review (Salome et al, 2019) which considers what the most effective occupational therapy interventions for fatigue are. It concludes a lack of robust evidence. <b>This is an area of uncertainty.</b>          Finlayson, M., et al. (2016). "Utility and Outcomes of a Digitally Delivered, Self-Guided Fatigue Management Tool for People With Multiple Sclerosis." American Journal of Occupational Therapy 70: 1-1.          George, S. and J. White (2014). "Strong evidence exists that multidisciplinary rehabilitation and fatigue management courses improve function and participation in people with multiple sclerosis." Australian Occupational Therapy Journal 61(4): 288-289.          Kos, D., et al. (2016). "The effectiveness of a self-management occupational therapy intervention on activity performance in individuals with multiple sclerosis-related fatigue: a randomized-controlled trial." What difference does being an occupational therapist with disabilities have on how that therapist works therapeutically with others?	what difference does being an occupational therapist with disabilities have on their therapeutic practice	The evidence addressing this question is mostly comprises of very small scale studies and conversational pieces. <b>This is an area of uncertainty.</b> Bevan, J. (2014). "Disabled occupational therapists – asset, liability ... or 'watering down' the profession?" <i>Disability &amp; Society</i> 29(4): 583-596. Chacala, A., et al. (2014). "'My view that disability is okay sometimes clashes': experiences of two disabled occupational therapists." <i>Scandinavian Journal of Occupational Therapy</i> 21(2): 107-115.	Service Users, Students
How can occupational therapy keep patients active whilst in hospital?	How can occupational therapists engage IF patients in activities to reduce loss of skills during long stay admissions with large open abdominal wounds while awaiting further surgery?	There is no robust evidence to address this question. This is an area of uncertainty.	Occupational therapists

<p>How can occupational therapy work effectively with digital technology to enhance their interventions and lives of people who access services? (e.g. using smart devices to manage health and illness)?</p>	<p>How can OTs work with digital technology to enhance the lives of individuals with mental health problems? How are OTs leading innovation in digital health care? Digital health care development in mental health - how OTs are doing this? How can digital technology eg the use of smart tablets help in rehabilitation? (I'm interested in stroke rehab, which is my area of practice) What is the OT and patient perspective of the above? Digital health care in care homes.</p>	<p>There is emerging evidence addressing this question but at present it is varied in scope and quality, and is limited. <b>This is an area of uncertainty.</b></p> <p>Axford, C., et al.
